TOTAL IT GLOBAL

TOTAL IT GLOBAL'S

IoT DEPLOYMENT
SERVICE

A CATALYST FOR PRECISION, CONTROL & PERFORMANCE

BUILT FOR THE **NEXT-GEN ENTERPRISE**

The IoT (Internet of Things) industry is experiencing an unprecedented growth, becoming a transformative force across all industries. The IoT market is set to grow to over $2.4 trillion annually, by 2027, with more than 41 billion IoT devices in operation[1]. This exponential growth is driven by the need to minimise human intervention and implement cost-effective, smart technologies, through digitisation. IoT is a complex system of networked devices and technologies that facilitate communication and requires specialised expertise and services to implement. No two IoT deployments are exactly alike, that is why your enterprise needs a partner that can customise it in alignment with your business goals and objectives.

Our IoT deployment portfolio combines high-quality service delivery, with wide geographical presence in 128 countries, to provide comprehensive coverage, via single line of accountability. Total IT Global's IoT deployment service catalyses the growth of next-gen digital initiatives and embedded intelligence, across processes and applications for enterprises, enhancing customer experience and workforce collaboration.

TOTAL IT GLOBAL

REIMAGINE INFINITE POSSIBILITIES WITH
# TOTAL IT GLOBAL'S IoT DEPLOYMENT SERVICE

CHOOSE FROM

Strategic Planning and Project Governance

From conducting site surveys to assistance on sensor and gateway selection, we support you with a strong foundation for successful project implementation.

Product Selection and Procurement

We work with your Sourcing teams to ensure that CapEx/OpEx strategies and complex licensing models are benchmarked, and managed, in line with your governance processes and logistics systems.

Pre-configuration and Testing

We create performance testing environments pre-configured with all possible conditions, to ensure that your capital investment reaps the desired results.

Risk Management and Maintenance

Reducing equipment failures through pre-use inspections and proactive maintenance services like break-fix support, warranty services, data wiping, or IT Asset services, with round-the-clock service support, help mitigate risks and prevent unforeseen downtime.
